

# EMERGENCY BACKUP POWER

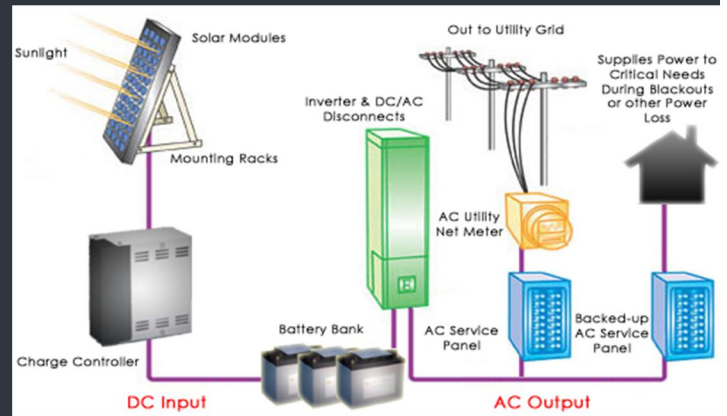

BACKUP POWER SOLAR SOLUTIONS FOR YOUR HOME OR BUSINESS THAT CREATE A CLEANER WORLD

As Americans, we do not like to think about what it would be like to lose electricity, but conditions from hurricanes, tornados, ice, to terrorism acts can interrupt our electricity service. Homeowners and business owners can find themselves unable to heat or cool their homes or businesses and run necessary appliances and lights. While flashlights or lanterns can provide light, many appliances will remain unusable until power from the grid is restored. This situation can be serious if critical applications such as medical devices, telephone, home office computers, sump pumps, or refrigeration are threatened. Solar-powered emergency backup systems installed by Pure Energy Solar Texas make it possible for homeowners and businesses to have continued access to electrical service during power outages both safely and silently.

Pure Energy Solar Texas is engineer-owned and customer focused on your energy and backup power needs. We share a passion for renewable energy production and energy conservation. Call Pure Energy Solar Texas to have us review your backup power needs and learn how you can create a cleaner world while providing backup power for emergencies for your home or business.

***“Will you be the one with the power on?”***

A grid-tied solar system with battery backup is a much better solution to a fossil fueled generator because a solar system is fueled by the most abundant and clean source known - the sun. Noisy fossil fueled generators smell, pollute, and can infiltrate your home or business with dangerous carbon monoxide poisoning. Solar systems can reduce your current electric bill by supplementing some of your current power needs and then provide backup power for critical circuits when there is a loss of power.
